## **AIR ONE IS PLEASED TO ANNOUNCE THE BIRTH OF ITS LITTLE SISTER THE WA RANGE**

**This range of lubricated screw compressor range of 30 to 45 kW is environmental-friendly, ergonomic, efficient and already the spitting image of its big sister, the Air One compressor, launched in 2005...**

### **ZOOM ON THE KNOW-HOW THAT MAKES SULLAIR A ONE-OF-A-KIND**

Thanks to its experience and values, Sullair is constantly boosting the trust and peace of mind it brings to its users.

- With the WA compressor, Sullair helps you to be proactive in limiting the footprint your industrial business leaves on the planet thanks to yet another range of eco-designed compressors.
- The Sullube high end lubricant optimising compressor operation (very high heat capacity, viscosity and oxidation resistance)
- Second-to-none manufacturer warranties as standard on the major components\*: 5 years on the air end, motor, radiator, tank, controller

### **YOU ARE GOING TO HAVE TO RETHINK ERGONOMICS**

From the moment you handle it, you realise that ergonomics has pride of place in the design. The WA range is easy to install and commission and easily integrated into your set-up.

However, it's in the operating comfort and easy maintenance that this compressor stands out from the rest.

- Its intuitive 2 electronic controllers (Microvisor 1.500 and Microvisor 2.000 on option) with universal language give instant, real time access to the main operating parameters.
- Simplified access to the preventive maintenance and setting components.
- A design with record low maintenance (preventive and curative).

### **SO EFFICIENT IT LOCKS OUT ITS COMPETITORS...**

Efficiency is not just about the capacity featured in the sales brochure!

With the WA compressor, efficiency is measured in:

- the very low operating cost thanks to a combination of a number of factors: the high capacity of the direct coupled motor and compressor assembly, extended life components (rotors, bearings, fluid, etc), low head losses, spaced out maintenance interventions, the manufacturer warranties offered, etc.
- A choice of control mode: on/off, control on suction or speed variation.
- A range of electronic controllers for you to optimise your installation: flexible, reliable and efficient control, sequencing without adding an external module, remote control, real time built-in clock, etc.
- Compact footprint and low noise level.
- Built-in water separator to deliver water free air in liquid form.
- Exceptional performance as standard: **operation up to 50° in ambient temperature and oil carry-over of less than 1 ppm!!!**

The WA compressor is a new product stemming from the Sullair eco-design program, a France relocation policy\*\* and a joint design with users. **WA: the new winning solution for your industrial compressed air.**

\*see conditions with your approved network

\*\* WA Compressor is designed and manufactured in Montbrison – France.

**Sullair**, World leader in the field of compressed air, Sullair designs, manufactures and sells compressors and pneumatic demolition tools for construction and industrial markets.

Sullair is a subsidiary of the American group United technologies (UTC) ranked among the great industrial groups includes the companies Otis, Carrier, Pratt & Whitney, Hamilton Sundstrand, Sikorsky and UTC Fire& Security.

Sullair Europe is an ISO 9001, ISO 14001 and OHSAS 18001 certified site, which means it can display a high level of excellence both in the management and the quality of its productions and in the Environment, Health and Safety (EH&S system).
